Who Am I? Finding Trading Edge

- Engineer -> Founder -> Full Time Trader
- Motivation - Time bound, Scalable, Low Dependency, Financial Freedom
- Success Mantra of how to be profitable -
 - Understanding basic Math behind Options
 - Having an Edge (To be in top 1 percentile traders)

Edge Defines Trading Style

Not Good At -

1. Reading Charts
2. Technical Analysis
3. Predicting short term market movements

Good At -

1. Macro View
2. Basic understanding of Option math
3. Automating trades using code

My Trading Style

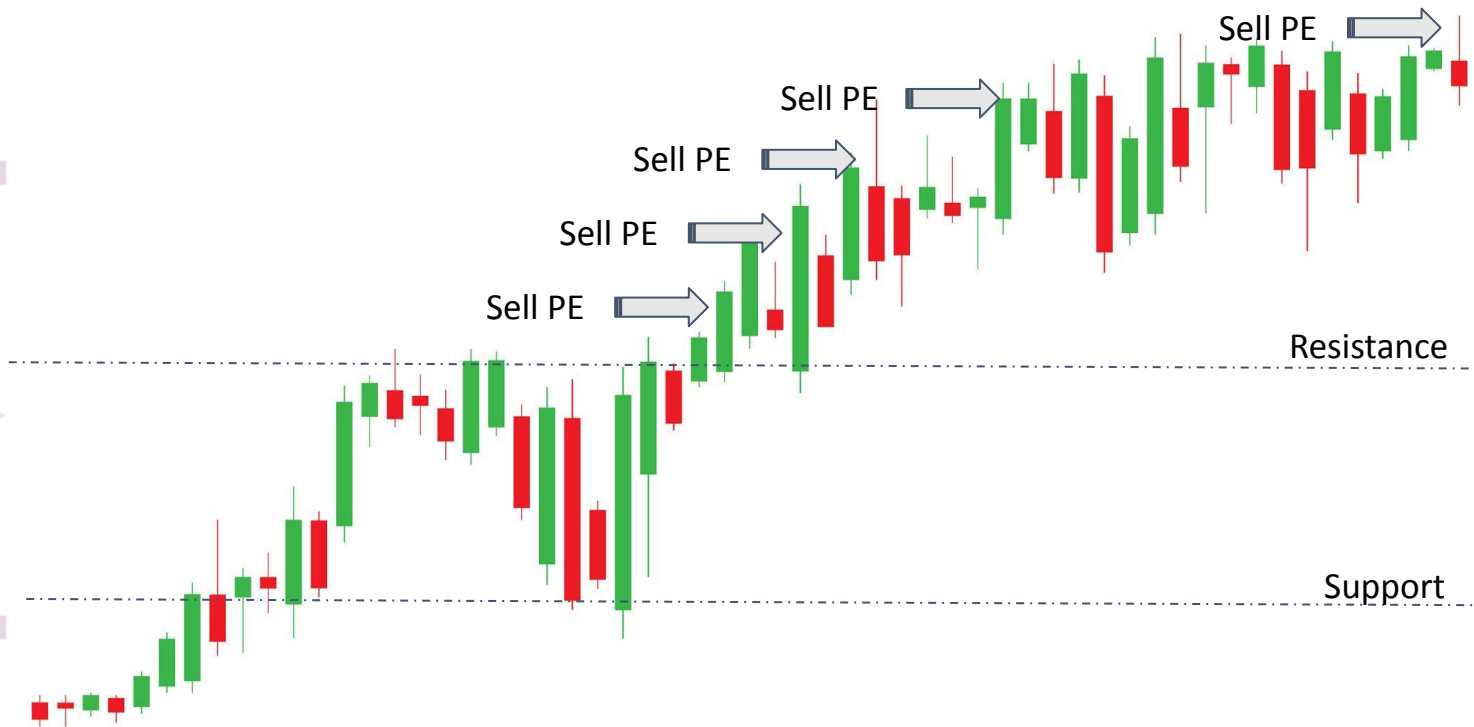

1. I am a relatively safe **Option Seller**, with **Theta** being my best friend
2. Due to decent Macro View I do trade in **long term options** (6-9 months)
3. **Adjusting open option positions** is easier because of good understanding of options math.
4. **Automate algos** to reducing risk and remove personal bias.
5. Low risk trades, expect 2.5-3% monthly return on the overall available margin.

3 Things We will Talk About Today

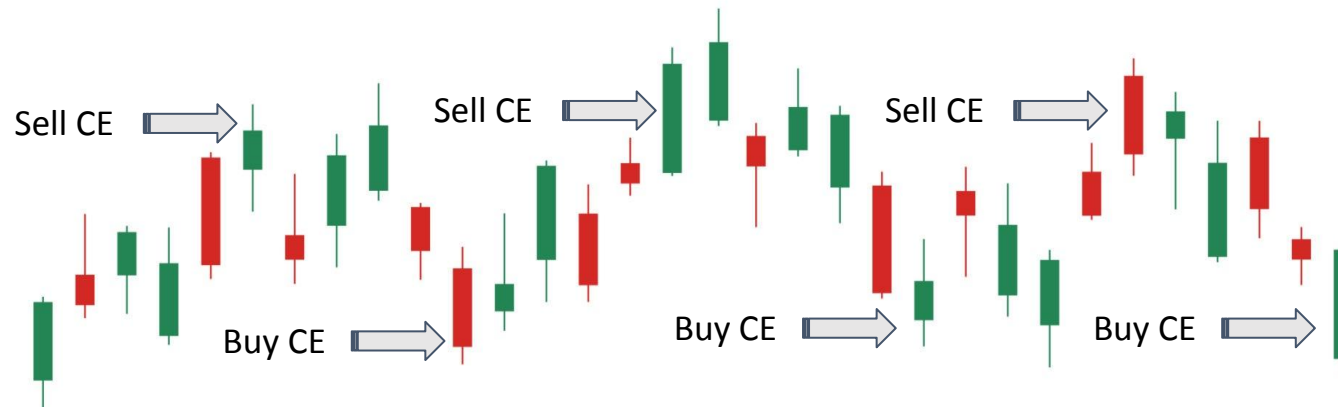

1. Survivor Algo (Trending Market)
2. Wave Extractor Algo (Non Directional)
3. Gamma Blast Detector (Ode Trading)

Survivor Algo (Trend Following)

1. Follows Trend - Sell CE in case of down trend.
2. Increase position sizing as the trend keeps getting stronger.
3. Can start booking profits after 3-4 trades have been executed.
4. Algo is open source and is available on github.
(<https://github.com/Raahi-Bhushan/trading-algo/>)

Wave Extractor (Non Directional)

1. Earns money when market moves up and down without going anywhere
2. Can run on Strike Price depending on risk and surety
3. Positions at day end can be adjusted in subsequent days
4. Algo is open source and is available on github.
(<https://github.com/Raahi-Bhushan/trading-algo/>)

Gamma Blast Detector (0dte Trading)

- **The big idea?** - Track sudden spikes in *Open Interest (OI)* to catch when the big players quietly load up on options.
- **The Signal** - If OI jumps >30%+ in just 3–5 minutes on *ATM or slightly ITM options* without the stock itself moving → that's a strong clue whales are buying.
- **What we can do** - We detect that activity early... and ride the wave by taking our own positions.
- **Built by AI** - The entire detection code was written by AI.
- **Open for you** - The code is live and free to explore on GitHub 🙌 [Gamma Blast Detector](#)

Few Tips to be a better Trader

- **Get the basics right:** Think of Greeks and their math as the alphabet of trading. Once you know how they connect with each other, the market stops feeling like random things are happening.
- **Size your positions wisely:** Position sizing is your backup parachute. If the first one fails, this is what saves you from a crash.
- **Trade the way *you* are built:** Your style should match your personality. Play to your strengths instead of forcing yourself into strategies that don't suit you.
- **Strong mind needs a strong body:** Handling market stress is much easier when your health and fitness are in check. A stable body builds a stable mindset.
